### **ICHOM Job Title**

ICHOM Standardisation Project Leader

### **Background**

ICHOM is a non-profit organization committed to transforming health care to a value-based system through universal measurement and reporting of patient outcomes. ICHOM was co-founded in November 2012, by leaders from Harvard Business School, the Boston Consulting Group, and the Karolinska Institutet in Sweden.

One of ICHOM's primary activities is the development of global Standard Sets by medical condition or population. Standard Sets are the most essential outcomes that all providers should collect, along with an essential set of baseline patient characteristics for risk adjustment. To develop these standards, ICHOM brings together Working Groups composed of clinical leaders, registry leaders, and patients and leads them through a structured, consensus-driven process. ICHOM also supports organisations to implement and measure our global standards of outcomes that truly matter to patients by medical condition and will launch a benchmarking programme in May 2016.

We believe measurement and reporting of ICHOM Standard Sets will:

- Help patients better choose the right treatments and providers for their needs
- Enable providers to benchmark and compare how well they are meeting the needs of their patients compared to their peers
- Allow payors to contract on the value of care delivered, not simply volume

It is clear that value-based health care (VBHC) will significantly influence practice in every part of the industry – including the life sciences sector (pharmaceuticals and medical technology). ICHOM engages with life sciences thought leaders to help guide this shift towards patient-centred outcomes and value. ICHOM also develop case studies and articles on the implementation of outcomes measurement and application of VBHC in different parts of the world. The dissemination of this critical knowledge is crucial to supporting the health care industry through this shift towards value.

ICHOM is a rapidly growing organisation that is gaining considerable traction worldwide. We believe in growing our employees, their personal development, and see this position as an excellent starting point for someone looking to progress their career in a fast-paced environment that adds value to healthcare systems worldwide.

### **Duties & Responsibilities**

We are seeking a Project Leader who can lead standardisation efforts in paediatric and mental health conditions. Duties include, but are not limited to:

- Recruiting and managing relationships with international medical experts and patient advocacy representatives.
- Defining project plans, setting milestones, running meetings and patient advisory groups, and coordinating the efforts of around 15-25 senior medical experts in any given working group.
- Recruiting and managing a research support team composed of a research assistant and research fellow.
- Contributing to the improvement of Standard Set methodology, and maintenance of existing Standard Sets
- Overseeing publications and reports by working group members to announce the standard set of measures and compare initial benchmarks across systems.
- Planning the marketing phase to drive adoption of ICHOM's standard sets around the world.
- Recruiting and managing relationships with physicians and senior management within our implementation partners.
- Planning the implementation phase to drive adoption of ICHOM's Standard Sets.
