

# Venous Thromboembolism

Population covered: All adults and young people (≥16 years old) with Pulmonary Embolism or Deep Vein Thrombosis\*

## Details

- 1 Measured using the PROMIS Scale v1.2 - Global Health, PEmb-QoL, and VEINES-QOL questionnaires
- 2 Measured using the Post-VTE Functional Status Scale
- 3 Measured using the PROMIS Short Form v2.0 - Pain Intensity - 3a
- 4 Measured using the PEmb-QoL and PROMIS Short Form v1.0 - Dyspnea Severity - 10a
- 5 Measured through the question: "Are you satisfied with your VTE treatment?"
- 6 Measured using the Anti-Clot Treatment Scale
- 7 Measured using the PHQ-9 and GAD-7 questionnaires

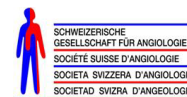

- 8 Measured through the question: "Have you experienced a change in your expectations, aspirations, values, or perspectives on life opportunities since the diagnosis of VTE?"
- 9 Measured using the Villalta Score
- 10 Chronic Thromboembolic Pulmonary Disease
- 11 Chronic Thromboembolic Pulmonary Hypertension
- \* Including anti-phospholipid syndrome, <3-month life expectancy, pregnancy-related VTE, and cancer-associated thrombosis

For a complete overview of the Set of Patient-Centered Outcome Measures, including definitions for each measure, time points for collection, and associated risk factors, visit <https://connect.ichom.org/patient-centered-outcome-measures/venous-thromboembolism/>
