

International Consortium for Health Outcomes Measurement

ICHOM is a 501(c)(3) Organization

Revolutionize healthcare - reduce your costs, eliminate waste and radically improve patient care.

Global healthcare systems are in crisis because we're not measuring the results that are most important to patients, consistently and uniformly.

60%

So far, we have tackled more than 60% of the global disease burden, spanning cancers to joint replacements, mental health to cardiovascular conditions. With your critical support, we will create a groundbreaking global system that truly prioritizes patients and transforms healthcare for all.

There is a critical global healthcare crisis: costs are rising in every country, but there is no connection to improved patient health outcomes.

To address this crisis, ICHOM collaborates with healthcare providers like you, individuals living with specific conditions, and world-renowned researchers to identify and prioritize the outcomes that matter most to patients. Together, we can drive healthcare to focus on what truly makes a difference in people's lives.

By leading the way in standardizing outcomes, ICHOM enables healthcare providers to make meaningful comparisons across the industry, driving consistency and reliability in patient care.

These comparisons will empower you to enhance their mission of delivering superior care and driving continuous improvement in healthcare practices, ultimately improving efficiency and fostering innovation in patient care. This commitment ensures that every patient receives the best possible treatment, setting new benchmarks for quality and excellence in healthcare.

Examples of Organizations Using ICHOM Patient-Centered Outcome Measures to Improve Patient Health:

The reality of VBHC brought to Luz Saúde a reality of privileges for each of the stakeholders that maximized efficiency but also each function that brings the best of each professional due to a specialization, and a final vision of reality and not perception of healthcare that could contribute to a value improvement for all stakeholders and a better-balanced ecosystem.

Sets of Patient-Centered Outcome Measures

If we all share a view of the health care we want—seamless, coordinated, patient-centered, free of waste—and then ask ‘What’s my role in that?’ we can get the job done.

Donald M. Berwick, MD, former administrator of the Centers for Medicare & Medicaid Services (CMS)
